Part 01 ➤

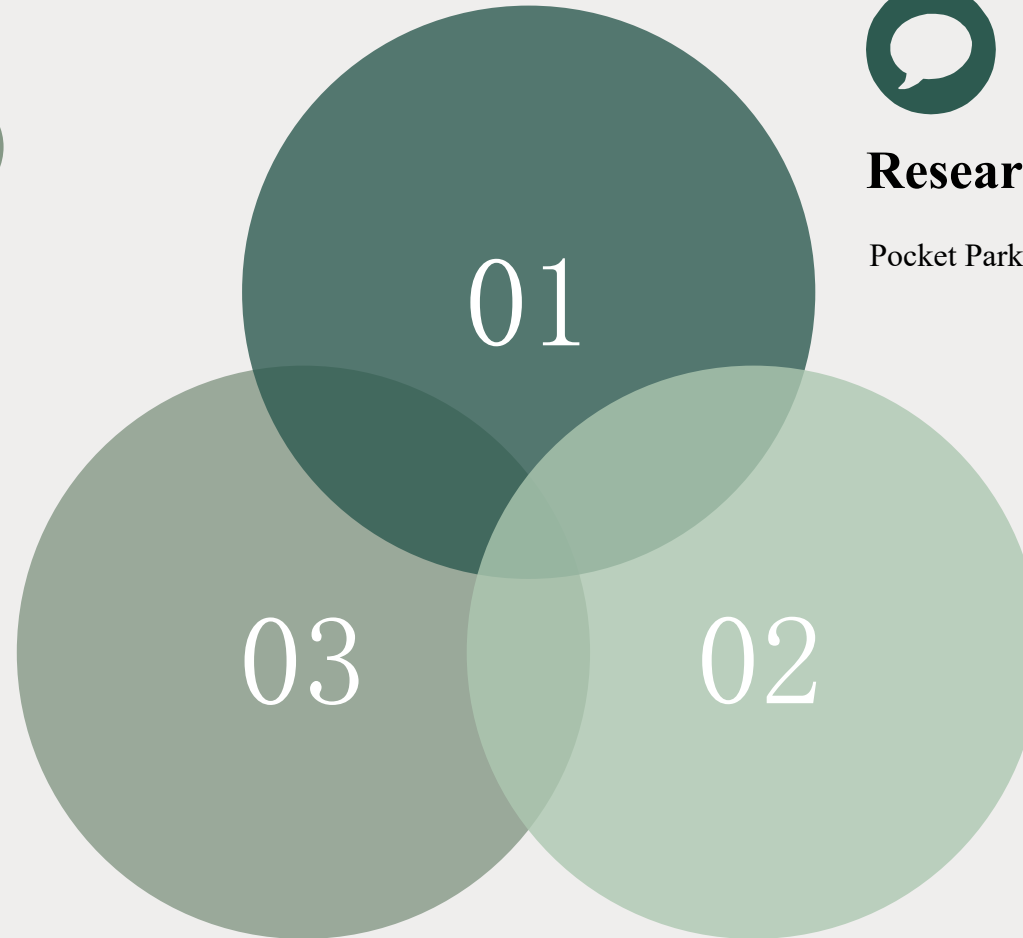

Research content of the project

Research Task

- Analyze relevant literature on the research topic;
- Analyze the practical experience of professional designers from developed countries in pocket park landscape design;
- Identify and organize landscape design methods for pocket parks using China as an example;
- Propose general recommendations for organizing landscape design in pocket parks using China as an example to implement relevant principles;
- Based on the research results and proposed suggestions, develop a landscape design plan for Pocket Park organization using China as an example.

Research object

Pocket Park Landscape Design

Xuhui Zhongcheng Green Valley is a huge "urban green carpet" that brings colorful living experiences to high-density urban areas. Designed with a natural and relaxed space, this' green carpet 'connects more with the daily lives of surrounding citizens, making the park an indispensable part of their lives. From parent-child amusement parks and nature classes, to sports activities and cycling adventures, to relaxing and lying down, the newly established park provides vibrant green spaces for citizens of all ages. As a city forest that is friendly to all things, Xuhui Zhongcheng Green Valley provides a rare oasis for the bustling city. From child friendly natural science popularization systems, to pet friendly convenience pockets, and to nature friendly habitats for animals and plants. The park has become a place where various organisms coexist and provide a good example for the restoration of regional microecological systems.

Setting up a vacant land adjacent to residential areas and commercial centers as a parent-child amusement park not only enhances the parent-child atmosphere of Songshan Lake community, but also creates revenue opportunities and growth points, highlighting social equality and equal care for low-income and high-income groups.

The game field is fully covered by trees, with rich terrain and natural atmosphere, meeting the nature of children of different ages and the social needs of parents for caregiving.

The first thing the design did was to deconstruct the site from the city's axis of symmetry and treat it as an independent entity. In fact, from a spatial perspective, it should also be an independent entity. Only by liberating from the original order can it have new possibilities, a more inclusive attitude, and a more open space. Therefore, the design proposition has shifted from how to activate a city's negative space to how to use the original site to construct a free, fun, attractive, and all-age basketball theme park. Yiling District is rich in oranges and is known as the hometown of oranges. Therefore, the story of colorful oranges falling into the site like other fruits falling into a plate becomes the source of color vitality for the site. The colors and textures of fruits are transformed into functional lines for a fun basketball court, which is particularly suitable.

The Gegewu Education Park covers a total area of approximately 3000 square meters, running from the pedestrian entrance of the community from east to west, running through the entire landscape axis. In terms of spatial planning, there are four themed game areas connected by the grid house, including the puzzle ladder, cognitive classroom, and natural maze. The sports area is combined with a football field, basketball court, and table tennis court, and there is also a rest pavilion for parents to take care of. In terms of spatial security, the entrance of the community separates people and vehicles, forming a enclosed space around the site. Safety fences and group greening are designed around the perimeter to greatly ensure the privacy and safety of the community.

It's a shortcut and security to assign all plants to a single color palette. Nature is colorful, and plants need to be shown in their truest and most fascinating colors. Like a timeless oil painting, we want to maximize the color benefits of plants, create a unique visual experience with different colors, and make color the label of the garden: bright orange and yellow, pure and elegant white, deep and elegant indigo, and passionate vermilion..... from dark green to light green, colorful plants in all shapes and sizes show up in our garden one by one.

According to different spatial situations, there are private enclosed gardens for enjoying flowers and resting, as well as semi-open spaces for parents and children to play and learn about plants, with different themes and integration with each other.

This space continues the industrial history of Suzhou Creek, creating a "borderless corridor" corridor and square pavilion with mirrored stainless steel. Paired with black and white granite walkways and cast steel sculpture "Imprint", it creates an artistic scene that carries the memory of the city; At the same time, a 300 square meter "Space Space" themed children's activity square will be dedicated to showcasing the mysteries of the operation of the eight planets in the solar system, creating an exclusive platform for outdoor science popularization and parent-child interaction. At night, the interweaving of lights along the Su River with lawn lights and tree lights in the park will create a warm atmosphere and become a popular choice for citizens to take a stroll and relax at night.

Site selection criteria

选址标准

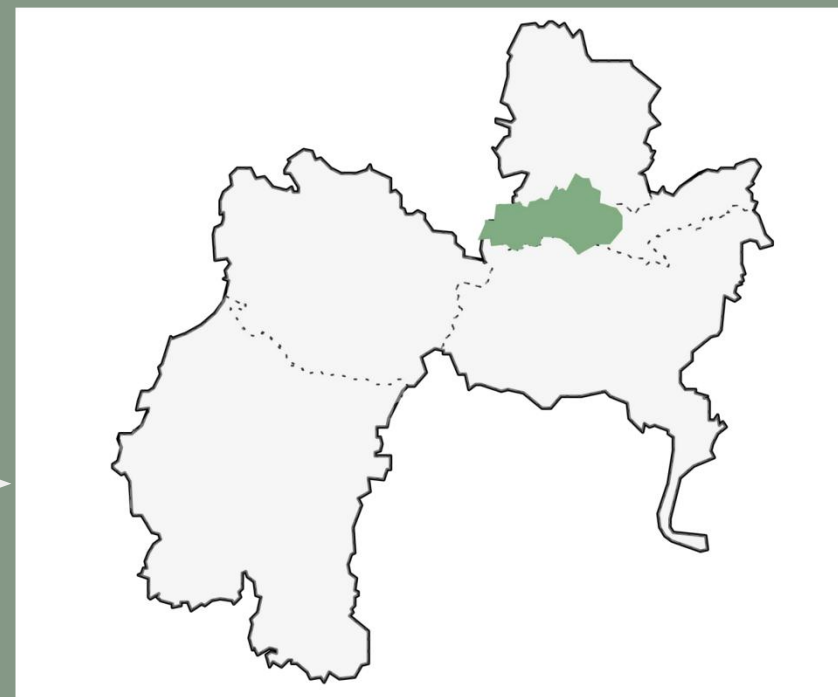

“

Among the 6 districts and cities in Changzhou, Zhonglou District was selected.

As the main research area of this study, Zhonglou District is located in the central area of Changzhou City, with convenient transportation, long history, and dense population. After comprehensive consideration, it is considered more suitable as the object of observation and research.

The research on the renovation design plan focuses on the selection of Minqiao West Pocket Park in the Bell Tower area for renovation.

”

Site selection overview

“

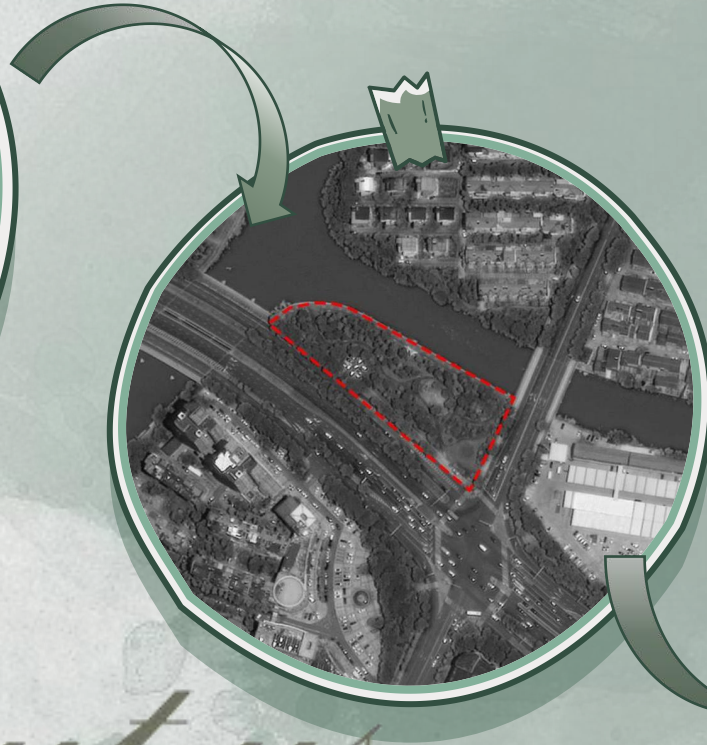

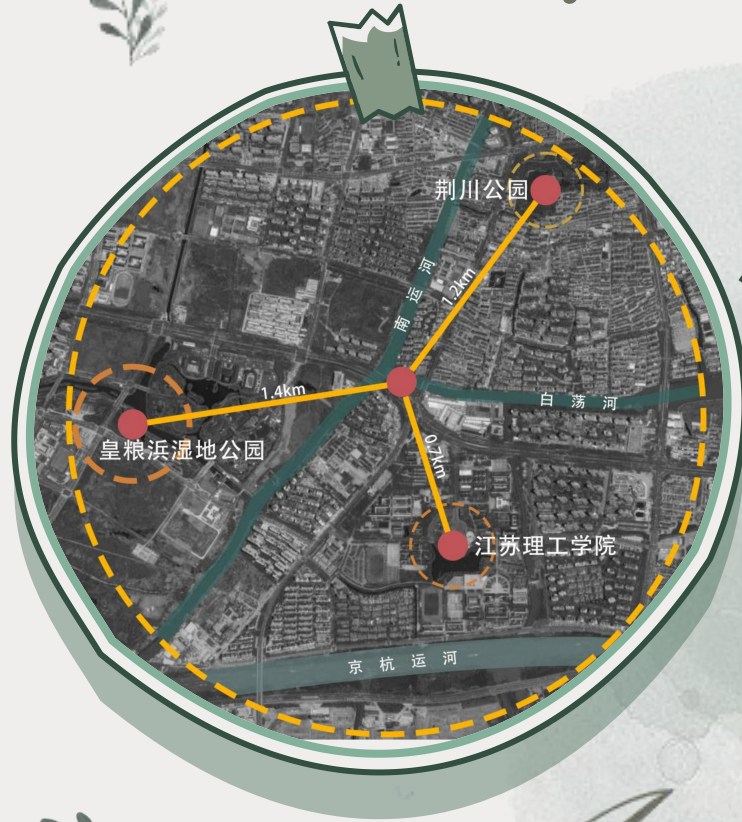

Weimin Bridge West Pocket Park

The site is located in Zhonglou District, at the intersection of Weimin Bridge and Zhongwu Avenue, adjacent to Baitang River and Nanyun Canal. It is an irregular plot of land about 210 meters long and 80 meters wide, with an area of about 12000 square meters, close to Zhongwu Hotel and Jiangli University.

”

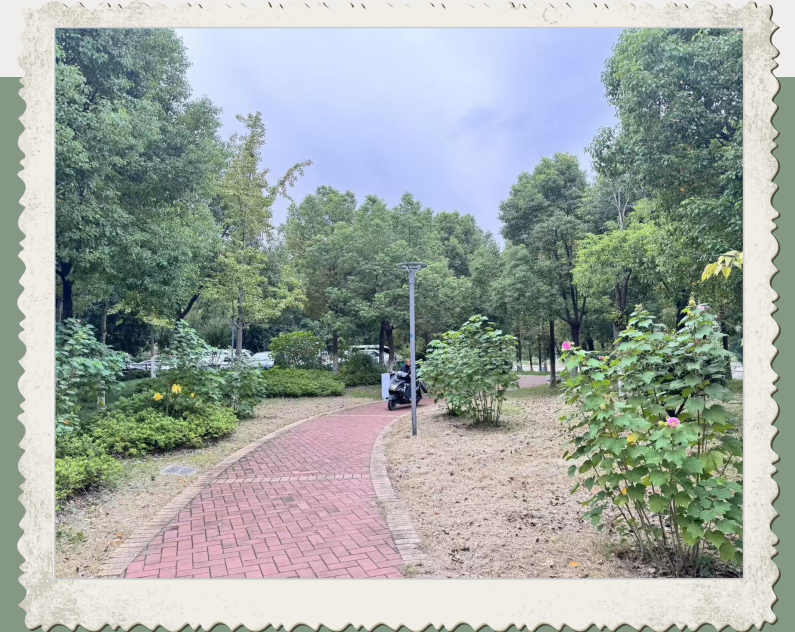

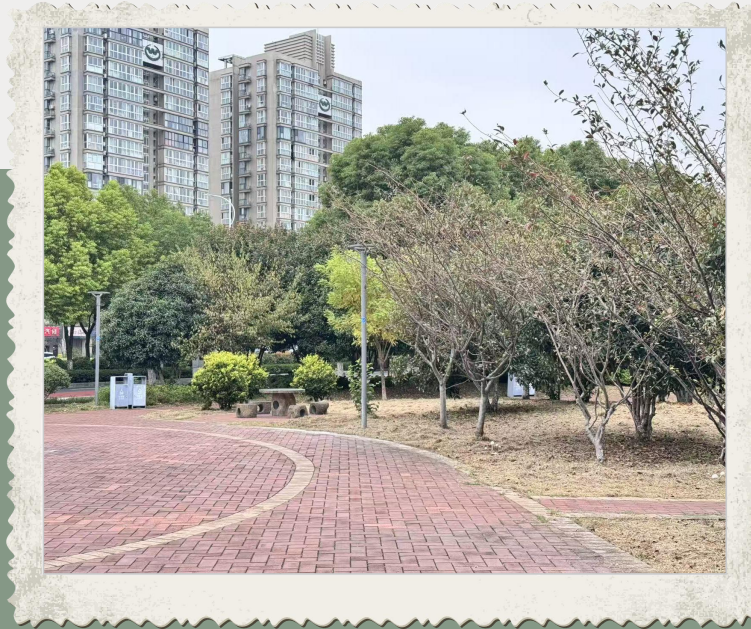

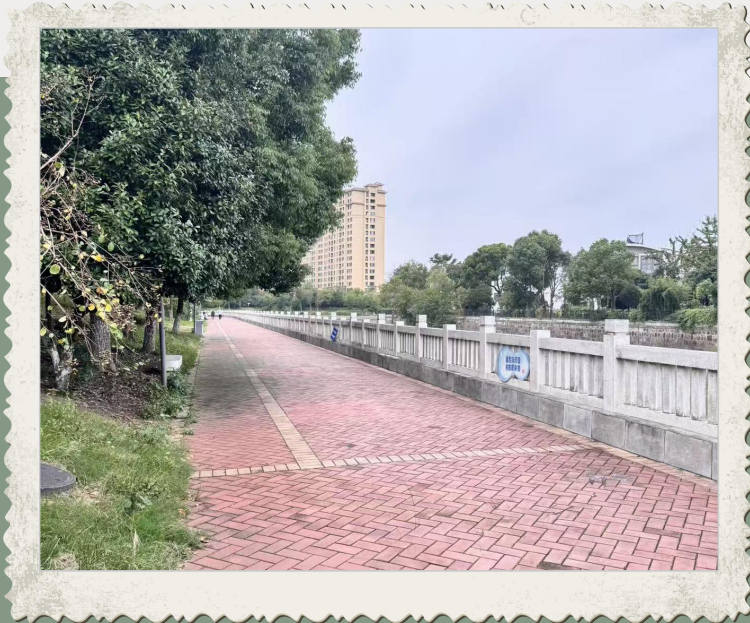

Site analysis

About us

Site analysis

- 1、 The entire pocket park has only one leisure seat;
- 2、 There are motor vehicles driving on the internal sidewalk;
- 3、 Lack of design for riverside roads
